## MOST COMMONLY TREATED CONDITIONS

Using the Electro-Acuscope/Myopulse Therapy System in Equine and Canine Therapy for Neuro-Muscular and Musculo-Skeletal Conditions, and Pain Management

*Over the last two decades, the Acuscope/Myopulse System has been used extensively in the treatment of both large and small animals. It has been successfully applied to a wide range of neuro-muscular conditions commonly affecting animal athletes participating in every area of competition: Racing (all breeds) • Harness and Barrel Racing • Roping, Cutting and Reining • Dressage and Show Horses • Jumping, Cross-Country, Polo, and Endurance • Sled Dog Racing (endurance and sprint) • Field Trial Dogs Agility Dogs • Show Dogs • Weight Pull Dogs*

In each of these fields, injuries frequently occur. Injury can result in an inability to perform competitively. Acute conditions often become chronic problems if not handled immediately. Without proper treatment, seemingly minor problems may become seriously complicated. The following are some of the most common conditions which have been treated successfully with the Acuscope/Myopulse System, and well documented by Veterinarians and Animal Therapists for over twenty years:

joint inflammation  
bowed tendons  
check ligaments  
body soreness  
muscle injuries  
ligament injuries  
muscle spasms  
arthritic conditions  
stifle problems  
back problems

pinched nerves  
edema  
bruising  
traumatic injury  
mouth ailments  
capped hocks  
curbed hocks  
whirlbone treatment  
splints  
green osselets

abscessed feet  
ring bone  
lick granuloma  
old age syndrome (vitality)  
epilepsy  
hyperactivity  
osteochondritis  
surgical scars  
rhinitis-allergic

Remarkable results have been obtained in the treatment of other conditions thought to be life-threatening or crippling. For example:

laminitis  
wobblers syndrome  
disc disease  
spinal damage

navicular problems  
avascular necrosis  
founder  
nerve paralysis

hip dysplasia  
spondylolithesis  
FELV (long-term  
symptomatic relief)

The Electro-Acuscope and Myopulse are FDA-approved instruments created originally for use on humans. This system has been used in physical therapy clinics, doctors' offices, and hospitals around the country since 1976. Acuscope/Myopulse therapy enhances traditional veterinary procedures to ensure a quicker recovery for the animal. There is a steadily increasing number of people who have been trained by certified ATS instructors to use these instruments on animals.
